

Media Servers

Sydney Conference & Exhibition Centre
Tuesday May 29th
6pm - 8.30pm

Visit www.alia.com.au for up to date details and to register your attendance

Media Servers are more than just a technically complex video juke box or a PowerPoint player. Aside from the basic functions of storing and replaying material from their internal libraries, media servers offer an increasingly sophisticated range of real-time video effects and manipulations that can be performed on a multiplicity of image sources, including live video input. The current generation of media servers allow video images to be "played live" in just the same way as the lighting, sound and music that create the atmosphere of a performance and an audience. Media Servers can truly transform a production or venue.

ALIA's Media Servers Tech Expo offers an unprecedented opportunity for everyone interested in creating a contemporary performance, dance or leisure space, to compare all of the Media Servers on the market and talk to the people who know all about this technology.
